

## ModelBuilder

- Calculates runtime
- Calculates accuracy
- Trains model
- Changeable parameters (batch size, epochs)

- DL4JController

## DL4JView

- Create UI
- Add interaction to UI
- Call training model

- ModelBuilder
- DL4JController
- DL4JMain

## DL4JController

- Call training model (ModelBuilder)
- Change parameters (epochs, batch size)

- ModelBuilder
- DL4JView
- DL4JMain

## DL4JMain

- Set up View and Controller

- DL4JView
- DL4JController
